

Refoodit[®]

By Alessandro Fontana

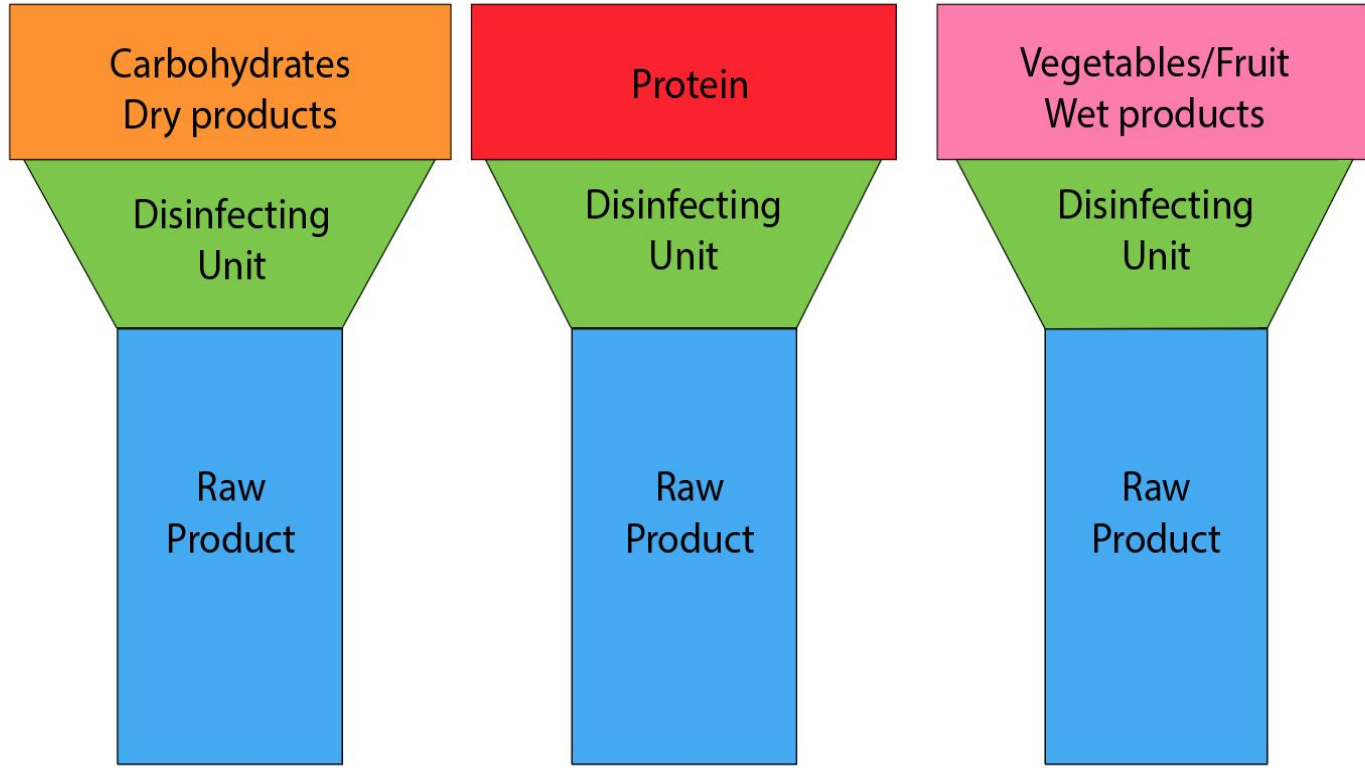

The problem

- Restaurants and bakeries end up with a lot of unused food at the end of each working day
- Most of the food is still fit for consumption and just gets wasted or goes to be composted or landfill
- Restaurants spend a lot of money for trash collection through taxes
- Lack of resources to reuse the food

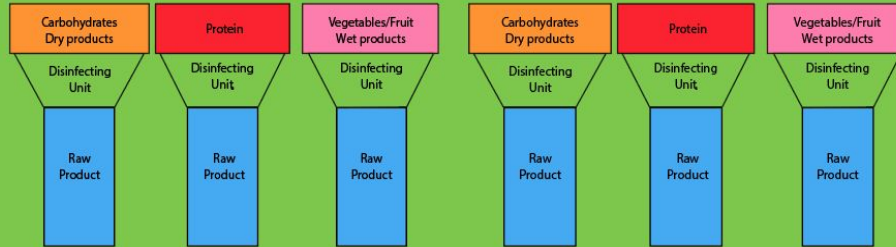

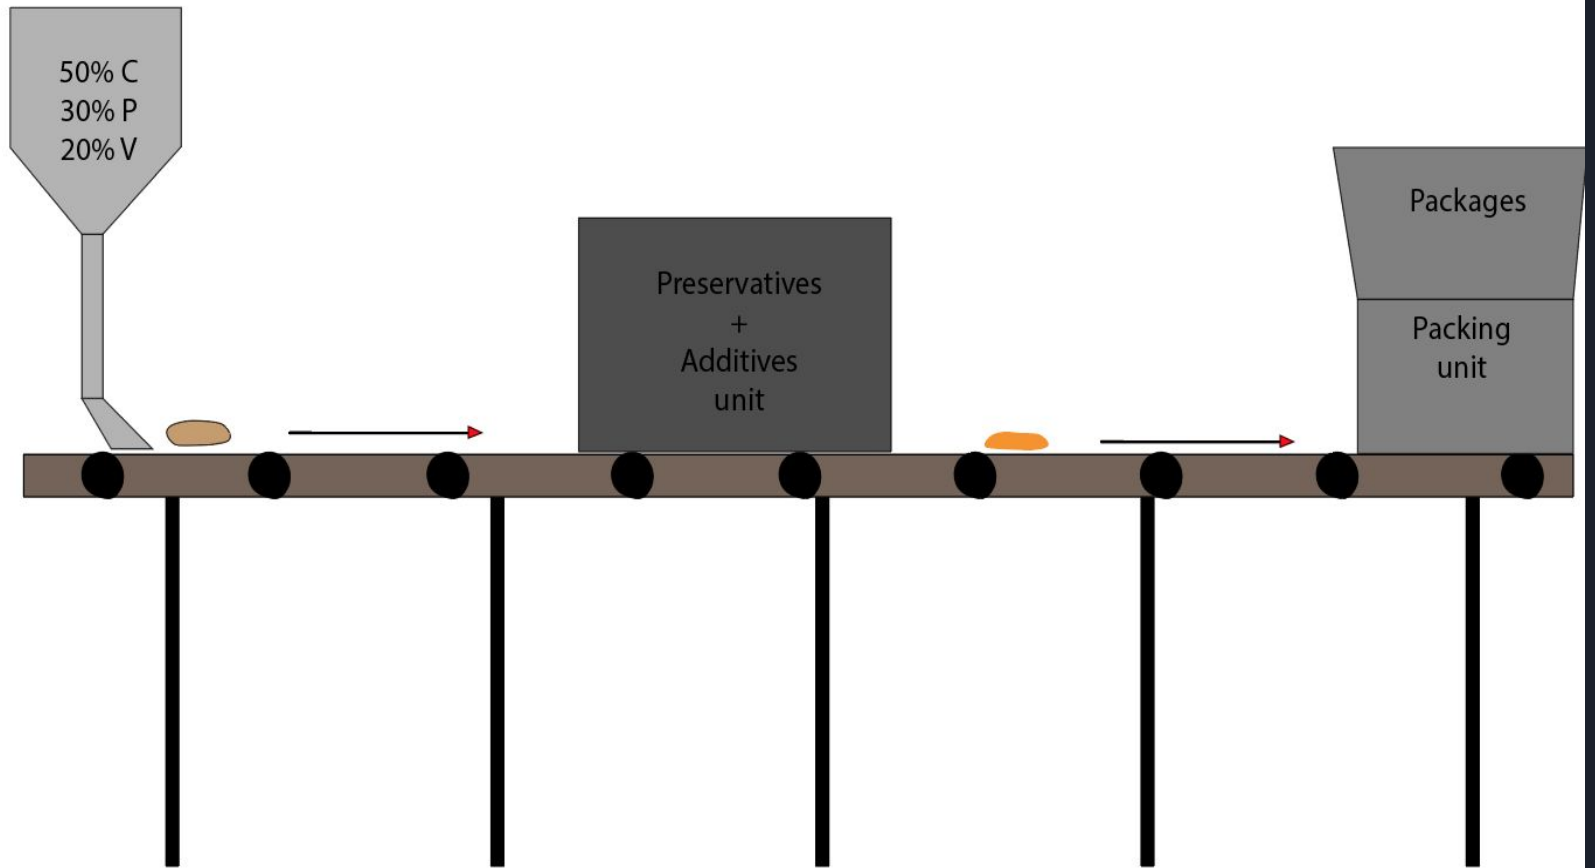

The solution

- Recycling food and converting it into pet food
- Categorizing the food waste based on different nutritional values
- Providing restaurants with specific bins that can make the categorizing process easy while also stopping the rotting process of the food
- Incentivizing restaurants by partially exempting them from paying taxes
